

Marek Cummings

Automotive PCB Design Engineer

AUGUST 17, 2026

Hiring Manager
ALTEN Dynamics
Detroit, MI

Dear Hiring Manager,

I am excited to apply for the Automotive PCB Design Engineer position at ALTEN Dynamics, as this role seamlessly aligns with my solid background in embedded electronics and my profound commitment to innovative design practices within the automotive sector.

In my current role at Tech Innovators Inc., I have spearheaded the design and execution of intricate multilayer PCBs for electric vehicle systems, adhering closely to stringent industry regulations while ensuring exceptional performance and reliability.

My journey has not been without challenges; in fact, I struggled initially with DFMEA methodologies in my early career. Yet, each hurdle transformed into an opportunity to refine my analytical abilities, especially in identifying design flaws before they became significant issues.

Through collaboration with multidisciplinary teams, I have fostered synergies that led to substantial improvements in product functionality and quality, a testament to my hands-on experience and proactive approach.

As I seek to join ALTEN Dynamics, I am eager to align my values of innovation and quality with your mission to deliver cutting-edge solutions in the automotive landscape. I firmly believe that my skills can dovetail beautifully with your vision.

I look forward to the opportunity,

Thanks,

Marek Cummings
