

Madeline Benitez

Biomedical Engineer – Ergonomics & Product Design

AUGUST 16, 2026

Hiring Manager
InnovaTech Solutions
Chicago, IL

Dear Hiring Manager,

I am excited to apply for the Biomedical Engineer – Ergonomics & Product Design position at InnovaTech Solutions, as this opportunity aligns perfectly with my academic background in Biomedical Engineering and practical experience in ergonomics and product design, and I truly believe I can bring immediate value to your team.

In college, I led a project designing ergonomic interfaces for medical devices, applying CATIA V5 for 3D modeling, and navigating user research to understand anthropometric dimensions; this hands-on experience helped me grasp the nuanced principles of human-centered design while understanding the finer aspects of usability and comfort in product development.

Relying on my technical skills, I collaborated with diverse teams, fostering a spirit of innovation and creativity, which resulted in significant improvements to our designs, ensuring our prototypes not only met specifications but exceeded expectations in user testing.

While studying, I faced challenges balancing academics and leadership roles, yet I persevered, enhancing my abilities to communicate effectively and work within multidisciplinary teams, demonstrating that collaboration breeds success and learning.

I look forward to contributing to InnovaTech Solutions, enhancing team dynamics, and bringing a passion for ergonomics and product design through dedication and insights, ultimately paving smoother paths for user interactions with your innovative products.

Thank you for considering my application.

Sincerely,

Madeline Benitez
