Sterling Engineering, Inc.
Hiring Manager
Lemont, IL

Dear Hiring Manager,

I am thrilled to apply for the Bioprocess Research Technician position at Sterling Engineering, Inc., a role that merges my ardent curiosity with growing capabilities, establishing a clear alignment with the progressive values embodied by your team.

My journey in biotechnology began rather unexpectedly, as I stumbled upon a research project showcasing environmental advancements; there, I discovered a profound interest in bioprocess methodologies that could contribute positively to our ecosystem.

In my recent role as a Biological Research Intern, I operated bioreactors, ensuring proper functioning while adhering to safety regulations, which bolstered my confidence in high-pressure lab settings, all while collaborating closely with fellow researchers and exchanging insights.

Additionally, my direct experience with analytical techniques, such as spectrophotometry and qPCR, not only enriched my technical skill set but also refined my ability to communicate complex data succinctly during our team meetings and discussions.

I am genuinely excited about the opportunity to contribute to Sterling Engineering's mission, as I believe my skills align closely with the required qualifications; furthermore, I look forward to the possibility of collaborating with experts who share my commitment to scientific innovation.

Thank you for considering my application.

Sincerely,

Elena Klein
