

August Strickland

Civil Engineer – Entry Level

AUGUST 12, 2026

Hiring Manager
Tetra Tech
Englewood, CO

Hello,

I am excited to apply for the entry level Civil Engineer position at Tetra Tech. This role aligns perfectly with my burgeoning abilities and ambitions, especially in engineering design.

During my internship at a local engineering firm, I faced various challenges such as site grading and drainage design. Each obstacle sharpened my skills, allowing me to approach problems with creativity and precision, enhancing my contributions to my project team.

In my academic experience, I conducted research on sustainable practices. Collaborating with peers, we worked on improving drainage efficiency, which not only impressed our professors but also strengthened our understanding of environmental impact.

I have a deep enthusiasm for civil engineering, particularly in pipeline design. My hands-on experience with CAD Civil 3D software allowed me to assemble coherent plans while rigorously following industry standards.

I also understand the importance of teamwork. I've worked closely with diverse groups, and I thrive in environments where collaboration drives success. Communication remains my strong suit, so I can convey complex concepts simply.

Thank you for considering my application.

Sincerely,

August Strickland
