Application for Junior QA Automation Engineer

SEPTEMBER 05, 2026

Hiring Team
Northstar Defense Systems
Huntsville, AL

Dear Hiring Team at Northstar Defense Systems,

I am applying for the Junior QA Automation Engineer role at Northstar Defense Systems. I am a U.S. citizen eligible to obtain a security clearance, and I hold a Bachelor of Science in Computer Science from the University of Alabama in Huntsville. My 3.6 GPA and five years of experience in automation, testing, and endpoint support fit the needs of this position.

In my current role, I build and maintain PowerShell scripts for **software packaging**, inventory reporting, and **IT service automation** across more than 1,200 Windows endpoints. I have created reusable **internal modules** with validation, logging, and error handling. This work interests me since it turns repeated service tasks into clear, dependable processes that teams can use every day.

My QA experience includes test plans, negative-path testing, release validation, and staged deployment through deployment tools. I test packages in virtual machines and review dependencies before release. I have supported **endpoint remote management** through **PowerShell** remoting, **Windows CLI** tools, and WinRM, using logs and system checks to resolve failures.

I work well with infrastructure, security, application, and service desk teams to turn requirements into maintainable scripts. I bring clear documentation, careful troubleshooting, and direct communication to fast-paced technical work. Northstar Defense Systems' focus on improving services through thoughtful automation is a strong reason for my interest in this role.

Thank you for your time and consideration. I look forward to discussing how my experience can support Northstar Defense Systems.

Sincerely,
