STRENGTHS

- ♥️ **Safe Production Recovery**
During urgent equipment events, restored operation through structured troubleshooting while protecting personnel, product, and validated status.
- 🔧 **Reliability Analysis**
Used downtime, MTBF, MTTR, and repeat failure history to find practical maintenance changes that teams could sustain.
- 👥 **Cross Functional Partnership**
Quality and Manufacturing partners relied on clear investigations that connected equipment behavior with yield and first pass results.
- 🔧 **Controlled Documentation**
Change records, work instructions, and validation reports gave technicians a clearer path through regulated equipment changes.
- 🔧 **Hands On Troubleshooting**
Peers sought help with PLC, pneumatic, sensor, fixture, and instrumentation faults when production pressure was high.

SKILLS

Equipment Engineering

Medical Devices Robotics

PLC Controls Pneumatics

Sensors Calibration

Automated Test Systems

Equipment Qualification

Change Control OEE CMMS

FMEA Root Cause Analysis

CAD Drawings

SUMMARY

Equipment Engineer with four years supporting automated manufacturing and test assets in regulated **medical device** and life sciences operations. Hands on work covers electromechanical systems, robotics, PLC controls, pneumatics, sensors, instrumentation, calibration, custom fixtures, and **automated test systems**. Structured troubleshooting restores production safely while protecting product quality, data integrity, personnel, and validated status. Experience includes equipment specification, FAT and SAT, commissioning, qualification, change control, preventive maintenance, and lifecycle documentation. Uses OEE, Availability, Performance, Quality, MTBF, MTTR, cycle time, yield, **first pass results**, CMMS history, FMEA, 5 Whys, **fault tree analysis**, fishbone analysis, and data trending to drive lasting improvements. Collaborative work with Manufacturing, Quality, Validation, EHS, Facilities, IT and OT, technicians, and suppliers supports compliant equipment performance.

EXPERIENCE

Equipment Engineer II

NovaMed Automation 📅 January 2025 - Present 📍 San Jose, CA

Owns lifecycle support for robotic assembly and automated test cells, guiding design reviews, qualification, maintenance, modifications, release, supplier response, and reliability improvement within GMP operations.

- Led robotic cell qualification using **validation protocols**, protecting release timing and **validated status**.
- Diagnosed PLC, pneumatic, sensor, fixture, and **software interface** faults through schematics and event histories.
- Built OEE reviews separating downtime, micro stops, slow cycles, false failures, and equipment defects.
- Used CMMS history, MTBF, MTTR, and **spare parts** usage to revise **preventive maintenance** tasks.
- Authored change records, risk assessments, **work instructions**, calibration requirements, and validation reports under GMP practices.
- Led supplier and technician recovery using FMEA, 5 Whys, trending, and post change monitoring.

Equipment Engineer

Arcadia Life Sciences Manufacturing 📅 July 2023 - December 2024 📍 Sunnyvale, CA

Sustained electromechanical **manufacturing equipment**, automated testers, instrumentation, and custom fixtures for regulated disposable device production, connecting asset reliability with yield and safe operations.

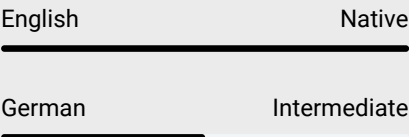

- Investigated **cycle time** losses, **jams**, intermittent faults, and reduced rates against confirmed operating baselines.
- Partnered with Quality and Process Engineering on defects, rework, **calibration drift**, and first pass yield.
- Prepared **engineering drawings**, technical specifications, maintenance strategies, spare parts plans, and equipment records.
- Supported FAT and SAT, installation, commissioning, and qualification, closing issues before production release.
- Trained operators and technicians on safe recovery, compliant operation, and escalation during equipment events.
- Coordinated Facilities and **IT and OT** support for asset installations, interfaces, and production readiness.

Associate Equipment Engineer

Precision BioSystems Operations 📅 October 2022 - June 2023 📍 Santa Clara, CA

Supported automated assembly, inspection, and **test equipment** in GMP operations, documenting failures, qualification work, maintenance history, and configuration changes for reliable production.

LANGUAGES

MY CAREER

- Equipment Engineer II at NovaMed Automation (1.8 Years)
- Equipment Engineer at Arcadia Life Sciences Manufacturing (1.4 Years)
- Associate Equipment Engineer at Precision BioSystems Operations (8 Months)

- Supported automated equipment using **robotics**, controls, pneumatics, sensors, instrumentation, and calibration.
- Created CMMS work orders capturing failure modes, repair actions, parts usage, and verification details.
- Applied fishbone analysis and **5 Whys** to separate mechanical, electrical, process, and measurement causes.
- Reviewed CAD drawings, schematics, wiring diagrams, and validation documents before maintenance work.
- Supported deviation and nonconformance investigations with downtime data, **calibration** records, and technical observations.
- Executed **qualification** and **change control** for fixture and sensor updates, escalating discrepancies before release.

PROJECTS

- Automated Test Cell Reliability Program** 📅 2025
Improved equipment readiness through OEE review, CMMS history, repeat failure analysis, preventive maintenance updates, and verified corrective actions.
- Regulated Equipment Qualification Portfolio** 📅 2024
Supported FAT and SAT, commissioning, qualification, controlled documentation, calibration planning, and production release for new manufacturing assets.

LEADERSHIP & AWARDS

- Received Certified Maintenance and Reliability Technician recognition in 2024 after demonstrating applied reliability practice.
- Earned team recognition for dependable production recovery and clear equipment investigations during regulated manufacturing escalations.
- Selected to coordinate supplier and technician troubleshooting for recurring robotic and automated test failures.

EDUCATION

- Bachelor's Degree in Mechatronics Engineering**
San José State University 🎓 GPA: 3.7 📅 2022 📍 San Jose, CA
Coursework: Controls engineering, robotics, manufacturing systems, instrumentation

CERTIFICATIONS

- Certified Maintenance and Reliability Technician 📅 2024
- GMP and Equipment Qualification Certificate 📅 2023

TECHNICAL SKILLS

- Reliability Metrics:** OEE, Availability, Performance, Quality
- Reliability Analysis:** MTBF, MTTR, downtime trending
- Root Cause Methods:** FMEA, 5 Whys, fishbone analysis
- Equipment Controls:** PLC controls, robotics, software interfaces
- Electromechanical Systems:** Motors, sensors, instrumentation
- Pneumatic Systems:** Pneumatics, valves, actuators
- Test Engineering:** Automated test systems, custom fixtures, false failure analysis
- Qualification Practices:** FAT, SAT, commissioning, equipment qualification
- Quality Systems:** GMP, design controls, deviations
- Documentation Systems:** CMMS, work instructions, controlled documentation
- Engineering Drawings:** CAD drawings, schematics, wiring diagrams
- Maintenance Planning:** Preventive maintenance, spare parts, calibration

PROFESSIONAL AFFILIATIONS

- Professional participation in regulated manufacturing, equipment reliability, and medical device engineering communities.

- Ongoing collaboration with Manufacturing, Quality, Validation, EHS, Facilities, IT and OT, technicians, and suppliers.
