

Sawyer Callahan

Vehicle Electronics Architecture Engineer

AUGUST 20, 2026

Hiring Manager
DCS Technologies
Sterling Heights, MI

Dear Hiring Manager,

I am excited to submit my candidacy for the Vehicle Electronics Architecture Engineer position at DCS Technologies, as my extensive experience developing integrated systems in military environments seamlessly aligns with your company's focus on cutting-edge vehicle power solutions.

Over the past eight years, I have led significant projects in networked systems engineering, providing clear strategies to enhance vehicle electrical architectures; my current role at TechDynamics has sharpened my skills in managing complex technical documentation while ensuring project timelines align, an issue I know can be challenging for many.

In my previous positions, I consistently conducted research and trade studies, refining high-level strategies to integrate vital electronic technologies, thus improving operational efficiencies and reducing costs significantly.

My work at ElectroTech Solutions taught me the importance of collaboration. I engaged with diverse teams to merge requirements and technical solutions effectively, building a supportive environment where everyone could contribute to successful outcomes.

I am more than eager to bring my blend of technical skills and leadership experience to your team, ready to forge innovative solutions while collaborating effectively with government stakeholders to meet military needs.

Thank you for considering my application.

Sincerely,

Sawyer Callahan
